

# agTRACE<sup>©</sup>

**agTRACE** is a digital **food safety management** program that connects clients with the information, resources, and training they need. This ensures that their operation is complying with all appropriate food safety and security issues required by **regulatory agencies** or **their customers**.

## TRACEABILITY

### Including content and resources in areas such as:

- internal audit documents and procedures
- GMP procedures
- external audit documents and procedures such as A.I.B. , SQF, and BRC
- regulatory standards references
- specific client standards
- F.S.M.A. compliance procedures and records
- operational procedures
- H.A.C.C.P, T.Q.M., I.S.O. 22000 or other programs
- inspection schedules and records
- housekeeping and sanitation scheduling and records
- maintenance scheduling and records
- client and regulatory agency reporting
- traceability software

## Why agTRACE?

### Regulatory Compliance:

Keeping up with data collection and record keeping programs can be time consuming and expensive. By leveraging cloud technology this data collection, storage, and report generating system can reduce the stress and cost of regulatory compliance.

### Standardization and Training:

Utilizing standardized data collection and reporting methods provides for a more efficient management program. Employees can keep current and enhance their food safety skills in a more accessible and timely manner.

### Voice of Customer:

agTRACE provides a structured pathway to obtain the true needs of your customers' food safety requirements and then builds a food safety program customized to meet those needs.

### Traceability Program:

agTRACE offers a timely, accurate, and verifiable traceability program for the food supply chain starting on the farm and flowing through to the processor.
