

BATCHING/MARK IV CONTROL SYSTEM

- Controls unlimited weighed, metered, or timed liquids.
- Automatic free-fall, pulse length, and high-speed shutoff adjustments at the scale or the ingredient level provide consistent weighing accuracy for all batch weights.
- Mixer batch size by formula specifically set for your system.
- Ingredient tolerances can be auto adjusted by batch size.
- Automated ingredient substitutions save money and downtime. One ingredient or a combination of multiple ingredients may be substituted in the current batch or for all the formulas in the entire production run.
- Control system that can be accessed by any workstation on the network.
- Delivers orders to one or more loadouts.
- Effectively controls your distributor or turntable.
- Multiple feed destinations for one feed order.
- Safety incorporation of plugs and slack chains.
- Numerous predefined reports and compatibility with industry standard report writers such as Access or Crystal Reports.
- Simplified, easy-to-use screens and graphics require less training for the new operator and fewer mistakes by the trained user.
- User-definable Feed Batch Pro application allows standard software to be installed at all sites, resulting in support and startup savings of up to fifty percent.
- The system is designed for minimal downtime when installing in a new or retrofit environment.
