

# GENTLE ROLL™

## *The Grain Cleaning Solution*

The Gentle Roll Grain Cleaner efficiently cleans grains to remove foreign material. Unlike other cleaners, grain is gently moved through a non-vibrating rotary drum and efficiently cleaned.

Because every facility is different, each Gentle Roll is specifically designed for the individual customer to best fit their needs. Increase your overall grain quality and reduce maintenance costs with the Gentle Roll's high screening efficiency and reliability.

# GENTLE ROLL™

## *The Grain Cleaning Solution*

The non-vibrating screening technology allows for gentle product handling and easy installation inside, outside, or on top of a building or structure with only the static operating weight accounted for. Each Gentle Roll is built to run continuously and is constructed with only the highest quality materials. The durable construction is weatherproof and provides excellent dust control.

Screen configurations are determined by the end goal and application, ranging from one to five screens. Each screen is wrapped around and bolted to the drum, turning as a single unit. Changing and inspecting screens is quick and simple to complete. One person is able to change each screen in a matter of minutes. Common screen configurations include:

Remove Fines  
1-3 Screens

Scalping  
2 Screens with  
a Concentrator

Remove Fines and Scalp  
4-5 Screens (2-3 to remove fines,  
2 to scalp) and Concentrator

Sizing  
1-5 Screens (depending  
on application and goal)

Only the Gentle Roll utilizes the rotatory drum for high screening efficiency and gentle product handling. Its time-proven reliability and quality make it the solution for all your grain cleaning needs.

### Available Capacities

	<u>Tons/Hr</u>	<u>Mtons/Hr</u>
1 Drum	43	39
2 Drum	86	78
4 Drum	171	156
6 Drum	256	234
8 Drum	324	312
10 Drum	428	390
